

SIGNLINK DB510

The Avant Garde directory is a low profile, slim line sign with a minimalistic appearance very well suited for use in modern buildings. From a front elevation perspective the outer frame is not very noticeable as it is less than 1mm thick. The design intent is to have a directory sign which features the panels rather than the outer frame. The overall thickness of the sign is only 6mm.

This model directory is suitable for small to medium size directories such as floor level directories in office buildings. The maximum recommended size is 1200 x 900mm. This sign is ideal for use in high pedestrian traffic areas.

The directory panels mount inside the outer frame - they can either be the standard extruded panel type or custom cut panels which are custom made to meet most size requirements. Standard panel heights are 125mm, 100mm, 84mm, 63mm, 50mm, 42mm, 35mm, 30mm, 25mm & 21mm. Fixing is by double sided tape and glue. Not suitable for mechanical fixing.

FEATURES

- Slimline design
- Economical
- Square edge
- Excellent panel security
- Can be used in recesses - panels front loading
- Standard finish is satin natural anodised silver
- Extruded panels have sand blasted finish to achieve maximum colour consistency in panels
