

DISPLAYMAX DIRECTORY

SIGNLINK DB520

The Displaymax has been developed to meet the need to have a directory system which has simple clear lines, is economical and fulfills the aesthetic requirements of designers and specifiers. This model is the next step up the range from the Avant Garde model. The outer frame is a minimal thickness at 1mm thick. It is suitable to make signs up to 1500 x 1500mm. The frame has been designed to allow for bracing at the rear, which would be needed when making the larger sizes. The frame is connected with corner stakes. The overall thickness of the sign is 12mm.

The directory panels mount inside the outer frame. They are front loading - they can be the standard extruded panel type or custom cut panels which are custom made to meet most size requirements. Standard panel heights are 125mm, 100mm, 84mm, 63mm, 50mm, 42mm, 35mm, 30mm, 25mm & 21mm. Fixing of the sign is mechanical, double sided tape or glue. The sign is supplied complete with pre drilled fixing holes.

FEATURES

- Slimline frame
- Square edge
- Strong frame which has corner stakes
- Suitable for mechanical fixing
- Can be used in recesses - front loading panels
- Excellent panel security
- Extruded panels have sand blasted finish to achieve maximum colour consistency in panels

OPTIONS

- In/out sliders
- Poster displays can be incorporated in sign
- Paper insert plates
- Panels can have Braille mounted
- Custom painting available
- Can have individual map panels or arrow panels
- Can accept engraving laminate inserts for 35mm H & 50mm h panels
- SignLink "Perma Print" graphics available (photo anodised process)
- Can be set up with header panels digitally printed on the back of clear acrylic
