

Directory Boards

Directory boards introduce your visitor to your building or organisation, so make your first impressions last with a system that provides clear direction in commercial and office situations, hospitals, universities... You name it. Literally.

Pizazz is SignLink's exclusive NZ manufacturing distributor, and we will gladly customise this series with colour, size and information. Panels can also be supplied complete with the SignLink "Perma Print" graphics: ink is indelibly etched into the panels and impervious to graffiti or cleaning in sterile environments. Information slats are held in place with magnetic tape, and suction cups for easy removal are supplied.

The SignLink directory boards are available in four customisable ranges.

The Avant Garde directory is simply perfect for modern environments. In profile, the frame's overall thickness is a svelte 6mm, letting the information take centre stage. This cost-effective design displays floor level directories in office buildings and high foot-traffic zones, with standard or custom sizes to suit any space.

The Displaymax directory system's sleek aesthetics and good value are often specified by designers and architects. The outer frame is just 1mm thick, and can hold more complex signs up to 1500 x 1500mm, as it allows rear bracing.

The Panache features a subtle 7mm wide radius edge, and this curve creates a softer look for the whole sign. This model is equally suited to both high-end and high-traffic applications.

The Grandeur is the 'granddaddy' of the four models. It can display detailed information clearly for use in large organisations, and withstand stringent cleaning in hospitals. Its robust frame has internal reinforcing blades that join double corner stakes in each corner, making it suitable for sizes up to 1200 x 3000mm.

Post & Panel signs The Signlink 1000 series was developed for outdoor applications, to identify and guide around corporate industrial estates, universities etc. Choose from four types of sign poles and several panels, some incorporating interchangeable text or poster plates. Interchangeable panels are front-loading, making it simple to change details.

Specifications and applications

We offer a range of panel heights (in mm) on all models: 125, 100, 84, 63, 50, 42, 35 & 25. The standard finish is satin natural anodised silver, but custom painting options are available. The extruded panels are sand blasted for optimum colour consistency.

The Avant Garde directory

- Svelte 6mm frame
- Ideal for floor level directories in office buildings & high foot traffic zones
- Available in standard or custom sizes
- Fixing is by double sided tape and glue. Unsuitable for mechanical fixing.

The Displaymax directory

- Can hold signs up to 1500 x 1500mm
- The sturdy frame is connected with corner stakes. The overall thickness is 12mm.
- Available in standard extruded panel type or custom size panels.
- Comes with predrilled fixing holes, for mechanical, double sided tape or glue fixing.

The Panache directory

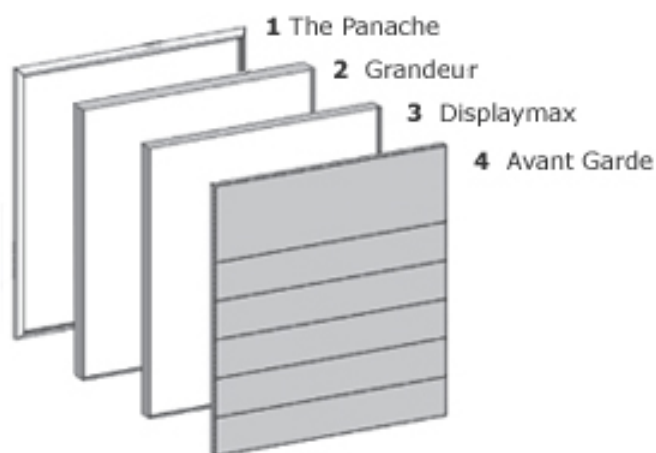

- The directory panels mount inside the strong outer frame, which also features corner stakes.
- Available in standard extruded panel type or custom size panels.
- Mounting is via mechanical fixings and predrilled fixing holes.
- Offers excellent panel security.

The Grandeur directory

- Robust frame features internal reinforcing blades & double corner stakes.
- SignLink aluminium split batten is included for mounting, and recesses neatly behind the sign.
- Model can include individual details such as decorator panels of slumped acrylic, in a range of metallic colours.
- Available in standard extruded panel type or custom size panels.
- Ease of assembly: signs can often be installed by just one person.

Directory Boards

	Avant Garde	Display Max	Panache	Grandeur

Can be suspended	No	Yes	No	Yes
Panel Security	9/10	9/10	9/10	9/10
Can hold slumped acrylic decorator panel	No	No	No	Yes
Perma Print Photo Anodised Panel option	Yes	Yes	Yes	Yes

Additional options available for all four Directory Boards:

- In/out sliders
- Can incorporate poster displays
- Paper insert plates
- Protective clear acrylic cover which mounts inside frame
- Individual map or arrow panels
- Engraving laminate inserts for 35mm & 50mm high panel

The Signlink 1000 series post & panel sign:

- All sign poles are extruded aluminium with aluminium caps and trims, including a cast aluminium federation solid ball cap. There are no plastic components.
- Panels mount securely into tracks located on the inner side of the poles.
- Some posts can accept internal galvanized steel box sections for added strength.
- The sign system is available to trade customers as a flat kit with or without sign faces, or fully assembled. When assembled, fixings are invisible.
- Assembly instructions are available on request.
