

# Point of Purchase (POP) poster displays

This series is very easy to install, with a patented 3-piece fitting that makes image change easy without dismantling the display. This sleek modern look suits any category, from banking to fashion to technology.

**Perfect for:** shop windows, menus, malls, point of purchase, product promotion, banks, boardrooms, directory boards, information panels, décor or branding panels... or almost anything you can think of!

**Freestanding Pop Panels™** can be installed single or double sided on a range of display stands. Both flat and curved display faces available.

**Suspended Pop Panels™** can be installed singly or in multiples from floor to ceiling and in a single or double sided option, with fittings to suit your needs.

## POP Panel Usage – Quick Guide

Choose a wall-mounted option to create a contemporary 3D effect - with permanent or picture hook fittings. Also available single or double sided, suspended or with stands.

Can be sheathed in a wide variety of materials to add impact to your graphics, including acrylic suitable for outside. Choose your back panels in coloured, frosted, brushed silver or detailed effects for almost any look you can imagine!

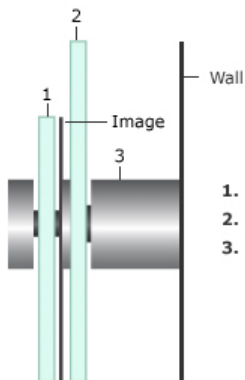

Our standard sizes range from A4 to A0. But some of our most stunning examples in this range were created on a grand scale - so ask us about tailored options.

## For wall mounted varieties: the fitting has three parts.

The first is simply screwed to the wall, spacing the back panel out. For optimum depth we recommend you try a standard 15mm spacer. There are also 20mm or 25mm spacers available. Our spacers are available in attractive finishes including satin chrome as standard. For other options, please ask us.

The second part screws into the first through the back panel and holds it on the wall when you change your image. This feature is exclusive to our patented user-friendly fitting.

The third section is a front mounting screw, inserted through the front panel holding the image and front panel in place. Fixings suit all walls.

1. An acrylic front the same size as the image
2. A larger back panel creates a visual frame
3. A range of fixing solutions that secure the front panel, image and back panel together and attach them to a wall, suspension cable or display stand.

## Front Panel Options

Flat Panels are the standard format with an acrylic panel the same size as the image.

C-Pocket has a return at the top and bottom of the front panel, fixed permanently to the back panel. Insert image from the side between the panels.

O-Pocket is similar to a C-Pocket but has its own back panel. These can be fixed to a wider range of back panels than the C-Pocket, and up to A1 size. Blocking Out can give O-Pocket displays a multi-layered effect.
